

About Scott Brown – Capital Computing Solutions

I grew up on a Dairy/Potato Farm in the mountains in the Southern Midlands of Tasmania. At the end of year 10, I joined the Navy as an Apprentice Avionics (aircraft electronics) Technician and was awarded best apprentice by Rear Admiral Sir David Martin. I had a very successful Naval career and left after 16 years. I then moved to Canberra, established Capital Computing Solutions (1997) and commenced working at TOWER Software in Engineering making TRIM (now Micro Focus Content Manager).

After releasing TRIM Captura in 1999, I moved from Engineering to work with the Sales team as the product specialist and was the Solutions Architect for over 50 Federal Government Departments. This was a dynamic period as Departments were making the transition from paper to electronic records and also saw the release of TRIM Context, which is still the current platform today. I also worked closely with State Governments and supported many Local Councils with solutions. In 2004, I did a Whole of Government solution for Botswana, and in 2005, I did a Whole of Government solution for Malaysia. In 2006, I moved to Tasmania to setup and run the Tasmanian Office and looked after the Tasmanian State Government.

In 2008, HP bought TOWER Software and closed down my Tasmanian Office.

Since then, I have freelanced within the industry and worked full time at Queanbeyan City Council, Central Queensland University, Australian Sports and Anti-Doping Authority (ASADA), Department of Human Services (now Services Australia), Murray Darling Basin Authority and Department of Social Services.

I am expert in all facets of Content Manager.

Today, I no longer wish to do any “techo work”, such as upgrades or installations. I desire to focus from an Information Management perspective and show and teach people and organisations the simplest and best ways. To work with existing customers and do pioneering again is my objective, this time revolving around BPM (Business Process Management – Workflow) and CRM (Customer/Client/Contact Relationship Management) working with an optimum balance of electronic and paper records, all from within TRIM, an integrated Source Authority.

If you require any support or assistance with Content Manager, then get in touch with me. I also have much experience with data migration to Content Manager and have carried out numerous Sentencing requirements. Don't put off the hard stuff any longer, don't be compromised, get in touch!
